IOS

You have received your eSIM profile (QR Code) by email and now want to install it on your device, follow our step by step installation guide below.

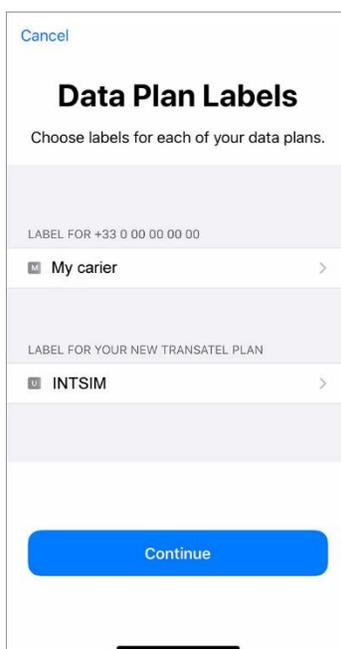

- 1 Update your iOS version: On your iPhone, go to Settings > General > Software Update and update to iOS 13.3 or later.
- 2 Open your camera app and scan the QR code you previously received by email. A pop-up will appear at the top of the screen, click on it

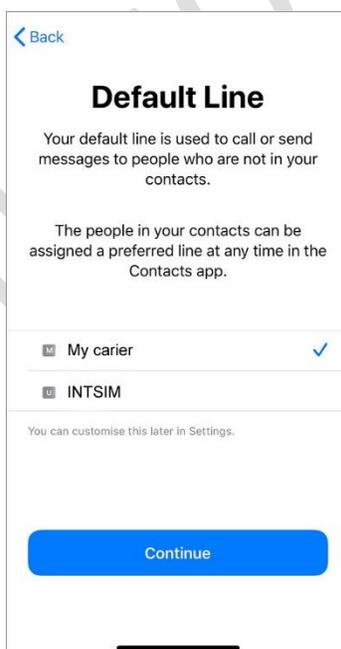

- 3 Tap on "continue" and "add data plan" in the following screens

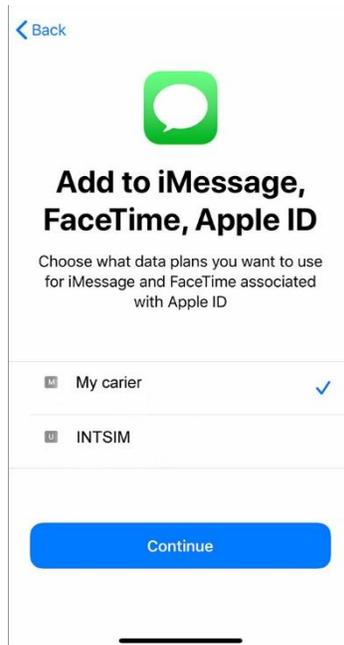

- 4 Rename the new plan as INTSIM to find it more easily

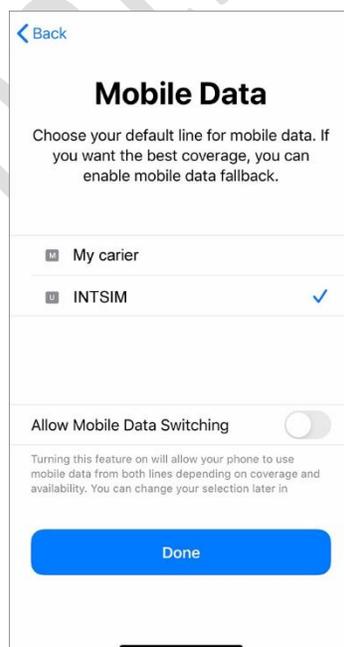

- 5 Select your local carrier as default line *(for voice)*

- 6 Select your local carrier for FaceTime & iMessage, You'll be able to use your INTSIM data for iMessage, but as your INTSIM line does not have a phone number you can share, it is not necessary to associate it to your Apple ID

- 7 Select INTSIM for Mobile Data Do **not** allow Mobile Data Switching – you would risk roaming on your local carrier

IMPORTANT: Now make sure the APN settings are configured correctly and Data Roaming is turned on. (see our eSIM manual)
